Super-size load on country roads: Kübler transports SCHEUERLE ShipyardTransporters on InterCombi axle lines

Hyundai Heavy Industries has once again purchased ShipyardTransporters from TII SCHEUERLE. In future, five additional ship section lift transporters will be operational at the world's largest shipyard. Haulage specialists, Spedition Kübler, recently transported the first two vehicles from the plant in Pfedelbach to the Heilbronn inland port facility. The designated route was kept exclusively on country roads. Great skill was required at roundabouts as well as through towns and villages. Often, there were only a few centimeters of space between the eight meter wide load and house and tunnel walls.

Centimeter by centimeter, the heavy load made its way through the narrow streets of Hohenlohe. The two vehicle combinations, almost 40 meters long in total, transported one SCHEUERLE ShipyardTransporter in each case. Each of these vehicles was eight meters wide. There has never been a special transport assignment of this size that had only used country roads throughout. In some places along the route between Pfedelbach and the Heilbronn harbor things became extremely tight. Often, only a hand's breadth separated the two 25 meter long, 1.9 meter high and 151 t colossal transport from numerous house walls. Hence, in the main road through the town of Bitzfeld, the width between the houses is just 8.22 meters. However, there was not much more space available along other parts of the route either. The Michelfeld-Erlin based Spedition Kübler team proved once again that they are the specialists for handling such tasks. In spite of the immense width of the transport, they could comfortably deal with any bottleneck.

A case for the SCHEUERLE InterCombi: robust, maneuverable axle lines are required on rural roads

The SCHEUERLE InterCombi axle lines also contributed to ensuring the success of the assignment. Kübler used 18 of these along with one four-axle tractor unit per ship section lift transporter in order to take the transporters the first 30 kilometers on the long journey to the customer. The InterCombi axle lines are likewise manufactured by TII SCHEUERLE, the industry expert for heavy transport on paved roads as well as off-road, a subsidiary of the TII Group. The series consists of modular platform vehicles with a width of three meters. They are flexible all-rounders that are suitable for handling a wide range of transports. Thanks to the low platform height and wide support base, even exceptionally wide loads such as ship section lift transporters or those with a high center of gravity such as extremely heavy construction machinery and mining equipment, wind power plant components, transformers or bridge elements can be safely and reliably transported.

Congested highways: convoy reached its destination only by using country roads

With a maximum steering angle of +/- 60 degrees, the InterCombi platform vehicles are maneuverable enough to transport the wide loads through tight bends as well as negotiating roundabouts and travelling through restricted spaces in town and village centers along the route. From the SCHEUERLE production

plant in Pfedelbach, the convoy only proceeded on country roads as all highway bridges that had to be crossed could only take a lower load and transporting this weight on the highways is not possible. Traffic signs and traffic lights had to be temporarily removed while sections of a construction site were also moved out of the way for the convoy. Several times the transporters had to use the lane of oncoming traffic or take the route through the middle of a specially covered roundabout. Metal drive-over sheets and curbstone wedges protected green areas and curbs respectively. However, such measures are routine for the Kübler team. After 7.5 hours, the transport arrived safely at the Heilbronn harbor facility.

Tried and tested: Hyundai Heavy Industries has numerous SCHEUERLE ShipyardTransporters in use

From Heilbronn, the barge continued on to the port of Antwerp where the two transporters were transferred to a seagoing vessel by the TII SCHEUERLE service team. Their final destination: South Korea. In future, the two ShipyardTransporters will be used by the South Korean company, Hyundai Heavy Industries, in the world's largest shipyard. A number of TII SCHEUERLE ship section lift transporters have been providing valuable service there for decades. In total, the new order from Hyundai Heavy Industries includes five SCHEUERLE ShipyardTransporters. Each of these provides a payload of 800 tons in order to move ship sections and other heavy shipbuilding components. Up to six of these giant vehicles can be coupled together to safely maneuver even the largest ship sections with a total weight of up to 5,000 tons.

Major order: three more ship section lift transporters on their way to South Korea in 2024

Two additional SCHEUERLE ShipyardTransporters will make the long journey to South Korea at the beginning of next year while the fifth vehicle will also be delivered next year. The professional team at Kübler will then demonstrate their skills once again and transport the ship section lift transporters safely to Heilbronn.

Photos:

Super-size load on country roads: Spedition Kübler transported the SCHEUERLE ShipyardTransporters from Pfedelbach to Heilbronn.

The 8 m wide, 25 m long and 151 t heavy load had to be maneuvered through narrow streets.

Robust axle lines: 18 SCHEUERLE InterCombi axle lines supported the successful transport. Each of the two convoys had a total weight of 250 tons and altogether an overall length of **50 meters**. Kübler mastered all bottlenecks with flying colors.

Precision work between houses: Kübler manoeuvred an 8 m wide load through 8.22 m wide streets.

Tunnel drive-through with the utmost precision: the convoy is safely navigated through a narrow tunnel.

Dilapidated motorways required alternative routes: both convoys reached their destination using country roads.

After 7.5 hours, both vehicle convoys reached their destination in the Heilbronn harbor.

Company profile

The TII Group, a company owned by the Heilbronn-based Otto Rettenmaier family, is a globally active manufacturer of heavy-duty and special vehicles and has a workforce of around 900 employees. The Group includes industry specialists, TII SCHEUERLE and TII KAMAG, and has production sites in Germany and India along with a worldwide organisation of sales and service partners. With innovative vehicles for manoeuvring and transportation operations, the TII Group, which is listed in the index of world market leaders, supports its customers in the transport and logistics sectors, building industry, plant engineering, air and space travel, shipbuilding, energy, steel and mining as well as yard logistics for realising a wide range of complex transport tasks. The TII Group holds the current world record of over 20,000 tons for transporting extremely heavy loads on vehicles. TII stands for the tradition of innovation, customer orientation and partnership as well as for high product quality and sustainability in heavy-duty mobility.
