

THE SCHEUERLE PPU PERFORMANCE CHECK

ENSURING FULL DRIVE POWER EVERY TIME

THE PERFORMANCE TEST FOR YOUR PPU

As drive units for modular transport vehicles, Scheuerle Power Pack Units (PPU) comfortably handle extremely difficult work assignments under the toughest of conditions through reliable continuous use on a daily basis. By means of our PPU performance check service, we thus ensure that your Power Pack Units always remain in tip-top condition and perform at their very best.

YOUR BENEFITS WITH THE PPU PERFORMANCE CHECK:

- Transparency:** the actual PPU performance is calculated to ensure you always achieve maximum power.
- Predictive maintenance:** the best possible prevention against breakdowns and downtimes during transportation tasks.
- Cost reduction:** wear or defects in components are detected and remedied at an early stage. In this way, extensive major repairs can be avoided.

THE STRESS TEST THAT ENSURES YOU STAY RELAXED

Your PPU is subjected to a comprehensive range of tests in our workshop using a specially developed test bench, something which would not be possible under real conditions. The test station can be used to simulate operations in a wide variety of driving situations and under full load. In the process, we can also permanently push the aggregates to reach the limits of their performance.

All measured actual performance values are systematically compared with the target values using a comprehensive checklist. If there are any deviations, troubleshooting is carried out by means of additional targeted tests. Any required maintenance or repair work can therefore be carried out immediately. We subsequently provide you with all test results and relevant engine data.

DO THE CHECK-UP

Use the PPU performance check for regular, preventive maintenance or as a safety test before large and difficult transport assignments. We will ensure that your PPU is up and running again as quickly as possible.

Just give us a call or send us an email – we're always happy to help.
